

Shielded cable for HD2003 3-axis ultrasonic anemometers

CP2003

Introduction

For HD2003 and HD2003.1 3-axis ultrasonic anemometer installations, this shielded cable supports a clean connection between the instrument and the system wiring. One side is fitted with a 26-pole watertight connector, while the other side has open wires for termination on site.

The 8 mm diameter cable is available in two practical lengths: 5 m as CP2003/5 and 10 m as CP2003/10. This gives planners and technicians a clear choice for different installation distances without changing the connector concept.
