

Rain gauge cable for data logger connection

CP2013-DB

Introduction

Clean wiring between the rain gauge and data logger helps keep rainfall measurement setups straightforward on site. This 1 m cable connects the rain gauge to the HD2013-DB fixed to the support staff, giving installers a defined connector on one side and open wires on the other.

The cable is equipped with a 4-pole M12 female connector on one side and open wires on the other side. It is specified for the HD2013-DB rain indicator data logger and supports a compact connection where the logger is mounted close to the rain gauge.
