

Connection cable for rain detectors

CP2013.2

Introduction

Reliable connection is essential when integrating a rain detector into a monitoring or control setup. This connection cable is specified for HD2013.3 rain detectors and gives installers a ready device-side connector with free wires for system-side wiring.

The cable has an 8-pole watertight connector on one end and free wires on the other, supporting practical installation in the field. Two lengths are available to suit different mounting distances: 5 m as CP2013.2.5 and 10 m as CP2013.2.10.
