

9-pole M23 cable for HD51 anemometers

CP51

Introduction

Wind measurement installations need a dependable connection between the anemometer and the customer wiring. This connecting cable is specified for HD51 anemometers in the HD51.3D... series, combining a defined M23 connector with open wires for system-side integration.

The cable has a 19-pole M23 female connector on one side and open wires on the other side. Two lengths are available for different installation layouts: 5 m as CP51.5 and 10 m as CP51.10.
