

19-pole M23 cable for HD52 anemometers

CP52

Introduction

Wind measurement installations need clear, reliable wiring between the anemometer and the customer system. This connecting cable is specified for HD52 anemometers and combines a defined M23 connector with open wires for flexible system-side integration.

The cable has a 19-pole M23 female connector on one side and open wires on the other side. Two lengths are available for different installation layouts: 5 m as CP52.5 and 10 m as CP52.10.
