

Cable for M12 connection, 4-pole, open wires

CPM12AA4

Introduction

For installations that need a fixed M12 connection on one side and free wiring on the other, this cable provides a simple, clearly defined solution. The 4-pole M12 connector supports quick connection at the interface, while the open wire end gives flexibility for integration into the target wiring.

Two lengths are available to suit different installation distances: 5 m as CPM12AA4.5 and 10 m as CPM12AA4.10. This makes it easy to select the right cable length without changing the connector concept.
