8-pole cable for LPPIRG01 M12 connection

CPM12AA8PG

Introduction

LPPIRG01 installations can be connected with a defined M12 interface on one side and open wiring on the other. The 8-pole M12 connector provides a clear connection point, while the open wire end supports integration into the target wiring.

Two length variants are available for different installation distances: 5 m as CPM12AA8PG.5 and 10 m as CPM12AA8PG.10. Both versions follow the same connector concept, making selection straightforward when planning or replacing cables for LPPIRG01 setups.
