

Power supply cable with M8 connector

CPM8

Introduction

HD50 series installations need a power connection that is simple to specify and easy to route on site. This power supply cable provides an M8 connector on one side and free wires on the other, giving a defined device-side connection with flexibility for wiring into the installation.

Three lengths are available for different mounting distances: 2 m as CPM8.2, 5 m as CPM8.5 and 10 m as CPM8.10. The shared connector concept keeps selection clear when planning new HD50 series installations or replacing an existing cable.
