

Fixing bracket for pyranometer and radiometer poles

LPS1

Introduction

Stable instrument positioning starts with the right bracket for the mast. LPS1 is a fixing bracket for photometers, radiometers, pyranometers and pyrgeometers, supporting installation on horizontal or vertical poles.

The bracket is suitable for poles with a diameter of 40 ÷ 50 mm. The source also identifies use with pyranometers including LPPYRA02 and LPPYRA10, giving technicians a defined accessory for compatible radiation measurement installations.
