

Alert notification App for Web-Portal

Web-Portal Alert App

Introduction

Alarm response depends on speed. This app informs users within seconds when alarms occur on their devices, using push notifications that have been set up in Web-Portal. It gives service teams, operators and responsible staff a direct mobile alert path when a fast reaction matters.

The app is built for customers using Web-Portal with connected devices. Once alarm notifications are configured in the portal, the app receives the alert on the mobile device and helps users react immediately in the event of an alarm.

The app store data safety information states that no data is shared with third parties. It also states that device or other IDs may be collected, data is encrypted in transit, and data cannot be deleted.

-  **Immediate alerts**
